

MERIVAARA FLEXION SETUPs & PATIENT POSITIONING

ORTHOPEDIC EXTENSION DEVICE FLEXION

Merivaara's new multipurpose extension device Flexion™ provides a single system for several fields of orthopaedic surgery together with Promerix™ operating table. With its multipurpose functions, Flexion is an excellent choice for hip arthroscopy, as well as for pinning and nailing of hip, femur, tibia or fibula.

ORTHOPEDIC EXTENSION DEVICE FLEXION

- Single system for several fields of orthopaedics; e.g. hip arthroscopy and lower extremity procedures
- Flexible patient positioning
- Intuitive one-hand adjustment for adduct / abduct and flex / extend
- Quick latching system - ready to use straight away
- Excellent C-arm access for imaging during surgery
- Modular system that can easily be upgraded to different applications with additional components

FLEXION BASIC TRAUMA SYSTEM

Basic trauma system

- For hip and lower extremity procedures e.g. hip, femur, tibia or fibula nailing

FLEXION MULTIPURPOSE SYSTEM

Multipurpose system

- For hip arthroscopy and lower extremity procedures
